In the lower part
 of the 170 ft. bank
 are found - large white
 nodules
 At 215 ft. the cut
 is 6-7 ft deep &
 the bottom is 3 to 4 ft
 up and down -
 sand is high on one
 side of the study
 red layer & the
 nodules are more
 numerous & there
 is much white
 lime at the base
 on surface of sand
 on both sides especially
 on lower part of it

The cut was cut at
 a point 235 ft
 from the base of the
 study (about 2 ft) at
 the 235 ft point.
 At 235 ft the
 cut is about 7 ft
 5 in deep from the
 surface of the
 nodules, the
 nodules are
 abundant in the
 sand. The sand is
 fine & uniform
 and is white
 and is very
 fine. The sand is
 not there on surface
 are 2 ft of sand
 brought out from
 them from the deposit

Room is about 50 ft
20 ft wide 2 in. 2 ft
ft at edge.

The new, good
 as well as
 that is a right
 direction of the
 north
 at the end of the
 of the line, the
 in the ground
 a line and line
 it is 10 in.
 it is 10 in.
 the note to the
 construction of
 there are three
 5 in. a line.

Box 3 - Corby a
trifle W. of W.
The best found were
under just beyond &
under paper plate -
Key hole in to extreme
right.
